

Hey! I have given a few tips and tricks here that you can use to be more comfortable with linux.

1. Use the **clear** command to **clean out** the terminal if it is getting cluttered with too many past commands.
2. Try the **TAB** button to **autofill** what you are typing.
For example, if you need to type Desktop, begin to type a command (let's go with `cd Des`, then hit the TAB key) and the terminal will fill in the rest, showing you `cd Desktop`. It saves time.
3. **Ctrl+C** and **Ctrl+Z** are used to stop any command that is currently working. **Ctrl+C** will **stop** and terminate the command, while **Ctrl+Z** will simply **pause** the command.
4. If you accidentally freeze your terminal by using **Ctrl+S**, simply undo this with the unfreeze **Ctrl+Q**.
5. **Ctrl+A** moves you to the beginning of the line while **Ctrl+E** moves you to the end.
6. You can **run multiple commands** in one single command by using the ";" to separate them. For example `Command1; Command2; Command3`. Or use `&&` if you only want the next command to run when the first one is successful.
7. Press **Up arrow** key to find previously typed commands so that you don't have to type them again from scratch.
8. You can **increase the terminal text's size** by pressing **Ctrl++** on your keyboard. In many cases, like for windows cmd, **Ctrl+MouseWheel** can also be used.
