!!! Attention !!!

The authors of this course or any party related to the course or its authors will not be responsible for any of the actions you take after taking this **course or watching its contents. Whatever you do is at your own risk.** This course is strictly based on white hat hacking practices and it doesn't promote any illegal activity.

Any numbers claimed within this course are for reference purposes only. Any trademarks used in this course are the intellectual property of their respective owners. All lab machines used are freely available on the internet.

This course contains professional penetration testing knowledge and everything has been done in a controlled simulated environment. They do not contain any illegal activity or hacking without written permission in general.

All videos and tutorials are for informational and educational purposes only. We believe that ethical hacking, informational security, and cybersecurity should be familiar subjects to anyone using digital information and computers. We believe that it is impossible to defend yourself from hackers without knowing how hacking is done.

We want to raise security awareness and inform our students on how to prevent themselves from being a victim of hackers. If you plan to use the information for illegal purposes, please leave this course now. As said, we cannot be held responsible for any misuse of the given information.

You should take proper written permission from the owner of the website/network/computer or any other property before attempting any attack!
