

Once you are done with the penetration test, you are supposed to make an **INDUSTRY GRADE REPORT** for the client that showcases the results of the test in a professional manner!

Please check the example I have attached with this lecture. I **have worked** hard for many weeks to design it. I hope today you will be extremely clear about what an amazing report that can be easily used for an **Expensive World-Class Pentest** looks like.

- One of the attached files is the MS WORD editable version of the report.
- The other attachment is a PDF version for reading purposes.

Note: You are only allowed to use this for your own personal use or in your own business. Do not distribute it further to anyone. Just share this course's link with them if they want to learn this report.

If you have any questions about the report and its components, feel open to ask them and I will help you out ;)
