This course offers you the tools, the insights and the motivation to become an advanced level hacker!

For me, an advanced ethical hacker is someone who who can work proficiently with all the things in this course, who is employable and can earn a good salary. **In reality, you don't want to just be an ethical hacker,** because that's just the knowledge base and not something that can actually earn you money.

So, you need to select a specific job role that you would like to do and go deep in that topic. Like you can become a penetration tester, or a vulnerability analyst, or an auditor or anything relevant like that.

Now, I teach you most of the good things in the course and it is hands on as well so you can feel reasonably comfortable using the tools, technologies and methods shown in this course... but obviously watching all the videos in **this course will not take you to the expert level by itself!**

You really need to do your own research, get hands on, and mostly **importantly interact** ... with other students in this course. Use the discussion tab, click on students' profile, help them, ask for help, become friends and learn together! If you ask me then I would say this collaborative learning is the best form of learning!

Further I suggest you to start taking niche specific courses now. Like, if

you have interest in Network Pentesting and want a job like Vulnerability Analyst, then you specialize in Nessus Pro or if you want a job like Security Tester then you may take specific courses and specialize in Metasploit Professional. Or say if you want to get into Web Hacking then take a course maybe on Burp Suite.

If not tools then you can start learning a Full Methodology. For Example: **OSSTMM or OWASP Testing Guide.**

And one more thing, especially for website hacking, you can choose **Specific Vulnerabilities** like SQL injection and start learning about them in deep. That's how you go advanced on a topic... Learn things in general first and then take specific courses on each topic of interest!

I hope I was able to add some value to your ethical hacking journey with this lecture and this course!

If you enjoyed the full course, I would appreciate it if you could take two minutes and **write a review** to this course.

Thank you so much for finishing this article! I hope this was helpful in showing you the way ahead :)
